Strategic Enterprise Sales with over 15 years of experience driving IT modernization and more recently in Big Data, AI/ML adoption across Singapore and Malaysia. Proven track record of securing high-value contracts with major GLC and Public Sector entities, partnering with executive leadership to deploy vendor-agnostic AI architectures, translating complex bespoke builds into portable, secure intelligence that scales across any infrastructure.

Key Strengths

- **Strategic Consultative Sales & Leadership** – Over 15 years of expertise directing cross-functional "squads" (comprising Architects, Solution Consultants, Partners, and Bid Management) to manage the entire "pilot-to-production" lifecycle for bespoke software and complex SaaS. Has consistently outperformed \$1M ACV targets for net-new accounts over the past 6+ years.
 - **Enterprise & GLC/Public Sector Navigation** – Demonstrated success in securing substantial contracts with GLCs and major Public Sector entities including MAS, GovTech, MTI, Synapse, and others. Expert at engaging CXO-level stakeholders across Singapore and Malaysia, with a deep understanding of complex organizational structures, procurement protocols, and AI security mandates.
 - **AI & Agentic Automation Strategy** – Specialized in migrating large-scale institutions from siloed data and legacy processes to advanced agentic workflows. Bolstered by a 2025 FlexiMasters in AI & AI Ethics from NTU, with a core focus on deploying Deep Learning and LLMs within responsible, ethical frameworks.

Work Experience

Workato, Singapore Enterprise Account Executive – SG and MY | Sep 2024 – Present

- **Strategic Territory Growth:** Actively source and secure net-new business in MY and SG Enterprise Accounts, including GLCs, identifying "greenfield" opportunities to transition customers from legacy data silos to Agentic AI and autonomous enterprise MCP (Model Context Protocol) environments.
- **Champion Building & Navigation:** Navigate complex organizational structures within enterprise accounts and key government bodies—such as GovTech, IMDA, JTC and Synapse — to identify executive sponsors and cultivate internal champions for high-impact AI automation projects.

- **High-Value Pipeline Execution:** Spearhead "automation-first" sales strategies, moving major prospects through the full sales cycle from initial research and executive messaging to closing complex, multi-year SaaS agreements.
- **POC Orchestration:** Lead cross-functional squads to run tight POCs that demonstrate technical feasibility and clear business justification for AI-driven workflows.
- **Market Alignment:** Successfully aligns Workato's AI-driven capabilities with the unique procurement, security, and infrastructure requirements of Enterprise Accounts and Singapore's Government on Commercial Cloud (GCC)

WISEO, Regional Business Development – Salesforce & Bespoke Solutions | 2019 – 2024

Managed end-to-end sales for high-touch, consultative projects where off-the-shelf solutions failed to meet complex institutional requirements. Consistently exceeded the \$1M annual revenue target by focusing on solution-centric sales rather than just "license shifting". This role allowed me to scale modern bespoke development pipelines by 300%, proving the value of customized digital transformation in new accounts for FSI and Public sectors.

NCS Group, Global Business Development / Land Transport Lead | 2016 – 2018

Led digital transformation bids for Public Sector agencies, specifically integrating AI/ML into citizen-facing platforms. My focus was bridging the gap between legacy infrastructure and Smart City capabilities to drive policy-led outcomes. Moving to NCS was a strategic step to manage larger-scale, "nation-building" projects that required deep alignment with Singapore's Smart Nation initiative.

Capgemini / SingTel & Optus / Logica / Comverse / DigitalRoute AB / Actility, Senior Consultant, Business Development, Sales | 2000 – 2015

Developed a foundational expertise in complex system architecture and project governance while managing large-scale transformation projects for Tier-1 Telco providers in APAC and Europe. I orchestrated the transition from hardware-centric models to software-defined architectures. This early career phase established my ability to manage complex delivery ecosystems involving third-party vendors and offshore centers.

Education

FlexiMasters in Artificial Intelligence and AI Ethics, 2022 - 2025, Nanyang Technological University (NTU), Singapore

Master of Technology (Software Engineering), National University of Singapore (NUS), Singapore
